Lecture 6 — X-Rays

Michael Brodskiy

Professor: J. Adams

January 22, 2025

- Target Materials and Wavelengths

  - Laboratory X-ray diffraction equipment relies on the use of an X-ray tube

- Bragg's Law

  - Refracted waves may be defined by:

$$x + y = n\lambda$$
$$d\sin(\theta) = x = y$$
$$2d\sin(\theta) = n\lambda$$

  * Where n is the "order" of the wave ($n = 1$ is the first harmonic), x and y are the distance between the angle of incidence and the original or refracted waves, and λ is the wavelength
  * Monochromators are used to limit the X-ray beam to be monochromatic in most cases
